In den mit + gekennzeichneten Gebieten wurde unter den einzelnen Punkten die Ordnung nach aufsteigenden Heft- und Referatenummern verlassen und durch eine stofforientierte ersetzt.

Die Anordnung für die Gebiete Kernspektroskopie und Kernreaktionen erfolgt nach aufsteigenden Kernmassenzahlen.

In der Physik unter stofflichem Gesichtspunkt sind bei den Elementen und deren Gemischen verwandte Stoffe zu Gruppen zusammengefaßt. Innerhalb der Stoffgruppen stehen Arbeiten über mehrere Stoffe voran. Dann folgt die Sortierung nach dem Periodensystem, Gemische bilden den Abschluß.

Binäre Verbindungen sind nach den Halbmetall- bzw. Metalloidanionen geordnet, Verbindungen mit zusammengesetzten Anionen soweit wie möglich nach dem charakteristischen Element des Anions. Innerhalb einer Anionengruppe gilt für die Kationen die Stoffgruppensortierung der Elemente. Organische Verbindungen sind in alphabetischer Reihenfolge angeordnet.
